MOTION #1: ACTION ITEMS FOR TERPENE TESTING

At the time of this motion, terpene testing is not required in Washington State. This list is provided for the ICT in the event lab quality standards for terpenes are required in the future.

1. A list of required terpenes, with CAS numbers and limits of quantitation, should be created based on data-use.
2. Clear definition of, and enforcement actions for, terpene “failures” should be written into WAC.
3. Terpene data should be collected by the state agency/agencies who’s WAC(s) requires accreditation of Terpene analysis in order to enforce previous recommendation.
4. Certified reference standards and second-source verification must be used by laboratories to report quantitative values.
5. Accreditation cannot be provided for non-quantitative values. Although laboratories can choose to still analyze/report non-quantitative results if they desire.
